Introduction

Audiences in Germany have taken to streaming platforms in a big way. With the COVID-19 pandemic keeping people at home, there’s been a rapid uptake in OTT services. Streaming platforms such as DAZN, Pluto TV, Rakuten, Waipu.tv, have met the moment by expanding in Western European markets, filling a void for audiences looking for convenience and escape. The adoption of CTV is a function of two dynamics: a seismic shift in how Germans consume content, and the growing fragmentation of linear TV.

No longer satisfied with paying more and getting less from broadcast budgets, German marketers are seeking new ways to connect with consumers— with reach and addressability. Here, CTV presents a boon for advertisers looking to capture targeted, highly engaged audiences at scale. Yet, in the relatively new world of CTV, digital marketers remain at a loss for actionable insights: there’s limited research regarding German engagement and performance. This begs the question— with mass consumer adoption of CTV underway, how can advertisers best take advantage of the immense marketing opportunity at hand?

Magnite’s research into the rise of connected TV adoption across Europe is vital in educating advertisers on the opportunity to capture audiences’ attention where they’re consuming content. Proof points like these will equip advertisers with actionable insights and the confidence to incorporate CTV into media plans. It’s important to understand the rapid rise in each region, but also acknowledge the nuances in viewing habits, to reach viewers with relevant and targeted advertising in a preferred viewing environment.

— Daniel Knapp, Chief Economist, IAB Europe
The streaming ecosystem continues to expand in Germany, and adoption rates are rising. Yet, little is known about how people are consuming streaming content. Are they committing to streaming services or just sampling? Why is adoption growing so rapidly? Most importantly, is CTV an effective advertising environment for driving KPIs? To fully understand the power and potential of CTV, we undertook a comprehensive study to address the burning questions that mattered most to advertisers.

Magnite’s “CTV: The Future Forward” report provides marketers with the data they need to fully understand how viewers are consuming, engaging with, and responding to CTV ad messaging in EMEA. The findings from this study will enable marketers to make smarter decisions about how to best allocate their video investments to seize the opportunity CTV presents in their local market.

**Study Objectives**

**Methodology**

Magnite engaged Harris Interactive to execute a general population online survey to a nationally representative sample of 2,100 respondents per country for a total sample size of over 10,500 people.

- Magnite engaged Harris Interactive
- 15 minute online survey
- 2,100 respondents / country
  - France, Germany, Italy, Spain, UK
- Total sample: 10,500
- Age: 18–64
What is Connected TV (CTV)?

Connected TV is ANY television set that is connected to the internet via a smart TV, game console or streaming device (such as a box or stick). CTV audiences generally refer to people watching premium, broadcast-quality, long-form content through app-based services. In the UK, CTV is the “largest screen in the house”, with the highest number of streams relative to desktop and mobile screens. For advertisers, CTV offers the best of digital and TV combined – precision targeting within a premium, big-screen environment. Throughout our report, we will be using the terms CTV and streaming services interchangeably.

OTT (over-the-top) refers to TV content transported from a video provider over the internet (bypassing a set-top box) for viewing across ANY screen, without requiring users to subscribe to a traditional cable or satellite TV service. In both CTV and OTT, content can be accessed on-demand anytime, or live-streamed for viewing in real-time.

Source: IAB Europe, “Guide to Connected TV”
There is widespread adoption of CTV in Germany. 74% of the population uses a streaming service at least once a week, with 44% using one daily. And it's not just SVOD: our data reveal that the weekly reach of AVOD, set at 55%, almost equals that of SVOD. However, reach is only half of the equation—the other half is time spent. Results show that 52% of all time spent watching TV is spent on streaming channels.

AVOD services consist of any streaming platform that is supported by advertising, including catch-up TV and free-to-view streaming services.
**Device Usage**

Smart TVs are the most widely used device for accessing streaming content:

It's worth noting that many German households have multiple devices for streaming OTT content: 38% of respondents in Germany have 3+ devices for accessing content, and in affluent households, this rises to 63%. This presents opportunities for multiple 1:1 addressable campaigns by device within a household.
In Germany, streamers are clearly winning over broadcast. To crown it all, they are also the primary place people go for TV entertainment. According to our study, 42% of TV audiences turn first to streaming channels instead of broadcast. When we look at the behaviour by age, a different picture emerges: 59% of Millennials and GenZers are far more likely to go directly to streaming channels first.

Results from our study suggest that German households prefer streaming services over broadcast, indicating CTV has staying power. As our study indicates, not only do 66% of audiences prefer streaming services over linear TV, but 58% would keep streaming services if forced to choose between streaming and broadcast.

Linear TV Viewing is a Habit, Streaming is an Active Choice

While broadcast is still the place many viewers tune to first, it is important to look at the reasons behind that. Because people tend to be creatures of habit, broadcast TV’s retention is largely due to what people are used to, as opposed to CTV, where viewers are making more active choices over content. As shown in the chart below, 71% of viewers watch broadcast TV out of habit rather than for the quality or variety of content.

On the flip side, content engagement is significantly higher for CTV. 58% of respondents chose CTV as their default service because it boasted their favourite shows, and 56% of them chose CTV because they were more likely to find something to watch. Overall, CTV viewers are more likely to choose streaming because of its quality and better ad experience as compared with broadcast. There is reason to believe that with greater exposure and more widespread internet access, broadcast viewers will let old habits die and adopt streaming for its content variety, curated viewing, and ad quality.

To better understand CTV’s massive appeal, we took a deeper look into the key drivers that inform consumer preference. To do this we looked at 14 Need states and did a cluster analysis to identify the key drivers. A key theme emerged: The Desire for Discovery. Viewers are driven by a desire to ‘be first’ by having access to exclusive original content (40%) and discovering new shows to watch (38%). While broadcast TV may be known for reruns, it’s streaming’s original content that drives sign-ups. (1) Audiences want to watch novel shows and discover original stories they can talk about with friends or family. The wealth of content available allows for finding hidden gems, programs that aren’t pushed out to mass audiences, but rather are discoverable to viewers looking for something that suits their own individual tastes.

This points to a greater phenomenon regarding CTV consumption: people want to watch TV in a whole new way. Viewers have an entirely different set of expectations of CTV vs linear TV. These expectations include programming of a certain caliber, tilting towards original content. More CTV audiences expect a viewing experience that is bingeable, personal and customized— in essence, creating their own entertainment channel. Think about it: the average watchlist has eleven shows queued up. That represents a channel’s worth of time and content waiting to be viewed. This presents a unique opportunity for advertisers looking to reach audiences in a highly customized, premium environment.

CTV Has Greater Holding Power

With broadcast TV, heavy ad loads can cause viewers to flip to other stations, dividing their attention and missing the ads altogether. Of course, missed ads are missed opportunities to connect with consumers. Attention is a critical factor in driving impact.

Our survey revealed that CTV’s lighter ad loads and control of on-demand viewing kept audiences watching the screen. Across the board, broadcast TV viewers are more likely to multitask when compared with streaming viewers. While watching linear TV, people are more likely to be eating, using other devices, switching between shows, or watching with their partner. This doesn’t bode well for broadcast marketers: the more disengaged viewers are from the programming, the less engaged they are with the advertising. Conversely, ads shown in streaming environments are more likely to keep eyes and ears tuned into what they’re watching.
**Still Room for Growth in CTV Budgets**

As we saw earlier, adoption of streaming platforms is taking hold in Germany in a big way, signalling that the market has room for new services. As the market expands, questions about subscription fatigue surface. Is there an appetite for new content or are people satisfied with what they have? Our survey strongly suggests that the market is far from tapped out: among current subscribers, 40% are likely to take out another paid subscription in the next six months. Further evidence shows room for growth when we look at how much people are willing to spend on subscription services. When asked about their current monthly spend, the average for all respondents was €27. However, when asked about the maximum they would be willing to spend, 65% answered that they would be willing to spend more per month for their streaming services: 39% would pay €1-9 more; 26% said €10 or more. This differential between current spend and maximum spend leaves room for almost one more subscription per household.

31% of German SVOD users find all the different options for watching streaming TV very or somewhat confusing.

One factor that may be holding consumers back from adding services is a general confusion about all the options available. Services coming into the market will need to make sure they educate consumers on who they are, what they offer, and how to access their content. With so many new services entering the market, it's no wonder that 31% of SVOD users find the choices confusing.
Consumers Are Willing to Watch Ads to Cut Costs

When it comes to content, consumers want a lot of choice, but as illustrated above, have a finite budget they are willing to spend on subscriptions. During this time of economic uncertainty brought on by the COVID-19 pandemic, many consumers are looking for ways to reduce household costs. While ad-free SVOD services are extremely popular, people are layering on AVOD services to increase their program options. Switching to Free Ad Supported Services (FASTS), such as Pluto TV and Rakuten, is an attractive option for consumers looking for deep content libraries at little to no cost. Consumers understand the value exchange of advertising for access to premium content. When asked about how they feel about watching ads in exchange for reduced subscription fees, 77% answered that they prefer to watch advertising in exchange for free or reduced-cost subscriptions.

This recognition of the content value exchange is further reinforced by the fact that 62% of subscribers of ad-free subscription services would switch to an ad-supported subscription tier if offered.
CTV combines the best of linear and digital, offering marketers high quality, long-form television environments, plus the precision targeting capabilities of digital media. By leveraging first and third-party data, CTV marketers can reach curated audiences en masse. Here, CTV captures the holy grail of marketing: timely, personalised messaging to coveted consumers without compromising scale.

Recent research from Magna and IPG Media Lab suggests that addressable campaigns can be highly effective in enhancing campaign performance, helping brands reach coveted audiences and meet their KPI’s. Their research showed that a “pre-roll video ad can drive +8% in unaided ad recall, and +5% higher purchase intent with the use of more relevant, personalised messaging.”

40% of respondents believe that in five years TV advertising will have only targeted ads.
Consumers Want Relevant Advertising

Regarding targeting, consumer privacy remains top of mind for advertisers and consumers alike, especially in Germany. Public awareness around privacy protections of personal data collection gave rise to GDPR, and scepticism about how much marketers seem to know about their online behavior is still a concern for many German consumers. Results from our study reflected that Germany has the highest level of sensitivity around data privacy of all the countries we measured.

Yet, despite these concerns, German consumers want ads that are relevant to them. When asked about what type of ads are acceptable, 65% said they want ads that are relevant to their interests and hobbies, and 46% are okay with ads that are related to something they searched for online.

Further, about 1 in 5 viewers are more likely to pay attention to personalized ads, and nearly 40% believe that targeted ads are the future of television advertising.

→ “I find personalised ads more interesting.” 22%
→ “I pay more attention to [personalised] ads.” 20%
→ “I find these ads less irritating/annoying than irrelevant ads.” 13%
→ In 5 years, television advertising will “have only targeted ads.” 40%

Clearly there is a disconnect between the concern for privacy and the acceptance of advertising tailored to content, search history, or personal interests. This suggests that consumers are willing to sacrifice some level of privacy in order to watch ads that are worth their time – up to a point that isn’t too invasive.
CTV Ads Are Highly Actionable

As previously discussed, viewers are highly engaged with content on streaming platforms. They not only prefer CTV over linear, but are less distracted as well. So what does this mean for advertisers? Quite a lot actually. When asked about various dimensions of ad acceptance, 72% of respondents indicated that they were receptive to advertising on streaming platforms in some way:

- Open to watching ads on streaming TV because there are less of them
- Open to watching ads to get access to high-quality programming
- Brand/product consideration of ads in favourite shows
- Discovered new products from ads in streaming shows

The payoff for advertisers is the impact of CTV ad exposure on viewer behavior. Looking at both brand and performance metrics, 65% of streaming viewers took a clear, tangible action after watching an ad. This high percentage of consumer action signals the power of CTV to deliver on ROI and other campaign KPIs. Of the respondents surveyed, a majority took one or more of the following actions:

- Searched online for the products/services advertised
- Discussed the ads with someone
- Recalled the ads later
- Bought advertised product or service

65% are receptive to streaming ads
CTV is Social Currency

In today’s social media savvy world, consumers share content that impresses their peers and indicates they’re tapped into the current zeitgeist, winning likes, followers, and engagement on social platforms. Here, CTV has remarkable social currency among viewers, especially among Gen Z and Millennials. Social behaviours that drive CTV audiences include the desire to be “in the know” and be part of the popular conversation.

In addition to social currency, content on CTV has the potential to create cultural currency effects because of its borderless global scale. For example: The Queen’s Gambit, a Netflix show about chess, sparked a renaissance for chess with search queries hitting a nine-year peak, inquiries for “chess sets on eBay” up 250%, and chess sales increasing 170%. And 34 years after it was first published, sales for The Handmaid’s Tale pushed the title up to second place in the paperback charts, no doubt driven by the enormous popularity of the show.

In fact, one could say that streaming programming has become the new “water-cooler” TV, creating communal, shared experiences that dominate workplace conversations, as well as Instagram and Twitter feeds. CTV fills the need for social currency, and draws viewers into shows that they might have otherwise skipped for the sole purpose of being able to talk about it. For example, 28% have watched a show just to be part of the social conversation, and 12% have posted about a show that they never actually watched!

3. Indiewire.com, November 23, 2020
## Key Takeaways

### CTV is Mainstream
Audiences across the board are now streaming every day, with AVOD usage nearly equal to that of SVOD, giving marketers the opportunity to reach coveted targets as they move through the purchase funnel. For millennial viewers, streaming is the first place they turn to for television content, which means less time spent on linear networks.

With reach that rivals broadcast, marketers need to include CTV in their media strategy to reach coveted targets they are missing on linear TV.

### Preference Drives Engagement
Viewers prefer streaming TV over broadcast because of the high-quality programming, the lighter ad load, as well as the ability to discover new, exclusive content. This high engagement with the content results in more attentive viewing to both the programming and the advertising.

CTV viewers like discovering new content. Consider diversifying the campaign budget across a mix of streaming services.

### CTV Works Hard for Brands
CTV’s high level of engagement coupled with the ability to target consumers with relevant advertising drives higher ad receptivity. CTV works hard for brands, driving behavioural KPIs of search, recall and purchase.

Utilise first and third party datasets for more efficient CPM’s against the campaign’s target audience.

### Small Brands, Big Opportunity
Ease of entry into CTV is enabling many smaller budgeted brands to transition from small digital mobile and computer screens to the larger living room screen by making TV advertising flexible and affordable for them to use.

Primetime is all the time in CTV, giving smaller brands an opportunity to stand out within premium, low-clutter television programming.

Overall, the results of our study provide a solid case for making CTV a strategic imperative. CTV is the future of TV, providing scale and reach at a level rivalling broadcast, with the value add of digital’s speed, targeting and addressability. Viewers are consuming more streaming TV due to the lockdown, and will likely continue watching more streaming content post-pandemic.

By understanding the power of CTV to connect with consumers, marketers can more effectively reach targeted audiences at scale within premium, brand-safe content.
We are experiencing a seismic shift in how people are consuming content in Germany - a trend which has accelerated through the events of 2020. Magnite’s latest research demonstrates this significant change in consumer behaviour - with 66% preferring streaming over Linear TV. When coupling this acceleration in CTV adoption with an openness from consumers to receiving advertising in these environments, advertisers have a huge opportunity to use the power and engagement of CTV to reach people where they are enjoying content they love.

— Johannes Paysen, Managing Director Central Europe, Magnite
